### **DETAILED ACTION**

This is an Allowance for application no. 10/075,087 in response to the amendment filed on January 8, 2007.

#### ***Allowable Subject Matter***

Claims 1-4, 6, 9, 11-18, 20, 23, 25-32, 34, 37 and 39-43 are allowed.

The following is an examiner's statement of reasons for allowance: The claims are allowable over the prior art of record since the cited references taken individually or in combination fail to particularly disclose a method and system for generating an MPEG output bitstream from an MPEG input bitstream having a first resolution, said MPEG output bitstream having a second resolution modified with respect to the first resolution of said MPEG input bitstream as claimed.

The closest prior art (US Patent 6,590,938 to Azadegan et al.) teaches a converting a high definition signal to a low definition signal in the DCT domain (Abstract, Fig. 9B). However, Azadegan fails to particularly teach or suggest "obtaining resolution modified second portions by subjecting the stored resolution-modified second portions to a second operation of modification of the resolution that brings back the resolution of the stored data from said second resolution to said first resolution, wherein subjecting said inverse-quantized second portions of the first resolution to motion compensation in the DCT domain includes using the resolution-remodified second portions as a prediction signal when motion compensating said inverse-quantized second portions of the first resolution" as claimed. This feature taken with the others in the claims teach over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
